## BOLT ACTION RIFLE R 93

*The invention of the R 93 straight-pull bolt action was nothing short of a revolution. When repeating, the bolt assembly pulls back and pushes forward in a straight line. There is no rotation of the bolt handle upwards or downwards.*

The R 93 minimizes body movement during repeating. It is also faster than conventional actions, allowing more time to aim and re-aim for subsequent shots. This is a particular advantage on driven and big game hunts. The R 93 bolt locks directly in the barrel. The entire firearm is renowned for its accuracy and resilience. All components, from the barrel and finish to the trigger and scope mount, are extremely robust and designed for the long haul.

R 93 Standard Semi Weight  
with black anodized receiver (extra charge)  
and optional extras

## R 93 SEMI WEIGHT

*Precision is a matter of stability. The perfect weight distribution provides a solid and secure position when shooting, even at great distances. The Semi Weight barrel will enable you to improve your shooting performance.*

Extensive testing shows that the R 93 Semi Weight consistently improves the shooters performance. Even when shooting freehand or with a support that is less than ideal, the Semi Weight barrel stabilizes the rifle and minimizes recoil. This, in turn, helps instill inner calm and greater self-confidence – two factors that directly impact your success.

## R 93 PROFESSIONAL SUCCESS

*Competition shooters have long appreciated it. Now hunters can also benefit from its advantages: The „Success stock“ is an interpretation of the traditional hole stock for the demanding hunter. Due to its perfect ergonomics, the Success stock allows for perfectly relaxed shooting posture and improves your success in the field as well as on the range.*

The R93 Professional Success proves unbreakable, robust and stable even in extreme weather such as very cold temperatures. Elastomer inlays on the forearm as well as on the pistol grip secure a safe grip in wet conditions.

- Professional synthetic stock, available in dark green
- Stabilized posture of the shooting hand

- Color range:
  - Dark green
  - Natural Stone

## R 93 PROFESSIONAL

*The tougher the conditions for hunters and firearms, the more robust a hunting firearm must be. The R93 Professional symbolizes the Blaser philosophy: a harmonious design offering unlimited practical suitability. The technology has proven itself more than a 200,000 times all over the world and is coupled in this instance with an extremely resilient stock.*

- Elastic inserts in the ergonomically optimized pistol grip and the forearm area ensure secure handling
- Shatter-proof and thermo-stable
- Left-handed version optional

A system for each requirement

## *The Modular System*

R9P

### *Caliber changes with the R93*

R93 rifles can accommodate any barrel variation. When using barrels in different caliber groups, the correct bolt head is required and can be changed quickly and easily at any time. Every R93 barrel is supplied with a correlated magazine.

Model changes with the R93

All R93 rifles can be refitted to meet Semi Weight, Match or Safari specifications. This requires exchanging barrels and adding the correct forearm.

Subsequently each R93 can be fitted with another gunstock coming with an action that is categorically integrated within the trigger group. When refitting, only the barrel, magazine and bolt are inserted.

Interchangeable gunstocks are also available.

All stocks can be adapted to the new barrel profile.

*Left-handed R* 93

Each R93 (except the R93 Professional Success) can be fitted with a left-handed bolt and stock. A right-handed bolt assembly can be exchanged for a left-handed one at a later date.

# Return to zero

In 1993, Blaser developed and patented a quick release rifle scope mount that soon replaced all others in the Blaser product line.

## RAIL MOUNT

## RING MOUNT

After zeroing the rifle scope to the barrel once, the Saddle Mount allows you to remove and reattach the scope at any time while the point of impact stays exactly the same. Never before has it been so easy to use different rifle scopes with one barrel. All popular rifle scopes can be mounted with the Blaser saddle mount.

# Blaser

# Saddle Mount

◀ Insert the Saddle Mount in the notches on the barrel while the locking levers are open.

Push down the locking levers with your thumb. Now the mount is locked on the barrel without causing tension. ►

This is how the rifle scope is mounted correctly. After zeroing in, the rifle scope can be detached and reattached as often as required – without changing the point of impact. ►

We would like to thank all hunters joining the foto shooting.

All information subject to change without notice.  
Models can vary from country to country.

Blaser hunting rifles are distributed through qualified Blaser dealers exclusively.
